⊡ PROJECTS

Througout these years working as developer and software architect, I have helped to build and architect these amazing projects:

Suburb - Estate Communities - A full-featured social app for neighbours within the same estate to connect, share and interact, safely. The app was done for iOS and Android platform, which calls APIs on server. I was in charge of building iOS app and the backend APIs.

Indiescapes - A curated marketplace dedicated to wanderlusts who seek out local, authentic travel experiences. The application was later acquired by BeMyGuest.

Starhub C.A.S.I.E - a one-stop sales hub to stay informed and updated on the telco industry news and access StarHub's channel partners portal. The app was for both web and iOS. It is built on Backbone JS and as a hybrid app on iOS platform.

Bank of Lao (BOL) Human Resource Management System - a web-based system that allows Human Resource (HR) managers to manage the Employees' profiles, Payrolls and generate useful reports for their internal checks and to submit to the Laos Government for auditing.

Formnestic - A useful open source library built on top of famous Formtastic library to enable developer to create nested form

ObjectiveCDM - An open source library which is used to develop iOS download manager in the most reliable manner. It supports auto resume on internet connection recovery.
